5. Floating and Soaking in TugTub™

Once the water in your TugTub™ is hot it is time to float and soak! Most find the experience of soaking in a floating hot tub to be extremely unique and enjoyable.

Caution: Care should be taken when entering and exiting the tub, especially in the dark.

Getting into TugTub™

Entering and exiting the tub is possible from a boat swim step, a dock, or directly from the water. When entering from a swim step or dock, it is best to position the tub so that you can lower one foot onto one of the tub's seats. To get into the tub it is easiest to dangle your feet over the edge and then lower yourself down so that you can stand on one of the seats. Once on the seat, you can step down into the tub and sit down. Remember, it is OK to sit on the edge of the pontoon when getting in.

Sit on the edge of the tub.

Step onto the tub's seat.

Step down onto the tub's floor.

Sit down on the seat.

Getting out of TugTub™

Before getting out of the tub, make sure that the tub is secured to a structure such as a swim step or dock. Then stand on one of the seats. Take a first step onto the inflatable, and then a second step out of the tub. It is best to take the two steps in a continuous motion. Make sure to hold onto a secure surface such as a rail or swim step when exiting the tub.

Stand on a seat, and put on foot on the inflatable.

Step up on the inflatable and onto the swim step.

Finally step up onto the swim step.

Letting the Line Out

Once the tub reaches an enjoyable temperature you can let out your lines and float and soak in an open area. First, turn the water heater off, then remove the heater hoses from the tub and place them on the swim step or dock. Now you can let your feet out and float and soak anywhere you like.

Visiting the neighbors

It is possible to unleash TugTub™ from your boat or dock and visit neighbors. This is best achieved by using an oar to paddle around. Remember, the tub holds about 200 gallons and moves with great effort. Do not attempt to use a motor to drive TugTub™.

Caution: Be careful not to navigate the TugTub™ into areas of large currents or other dangerous hazards such as surf, or bad weather. Avoid areas with heavy boat traffic.

FOR IMMEDIATE RELEASE

Portable Floating Hot Tub Launched
Take the Chill Off Boating With a Floating Spa!

Catalina Island, CA – May 26, 2008 – TugTub™ LLC has released the FNS-200, a lightweight, compact, portable hot tub designed with the space and power limitations of boaters in mind.

On a mooring or off a dock, the TugTub™ takes 15 minutes to set up. An inflatable pontoon, a folding frame, and a thermal barrier make up the tub. The tub then quickly fills with 250 gallons of water from the ocean, lake, river, or dock hose via super fast pumps powered by a boat's 12V or an optional external rechargeable battery.

TugTub™'s small but powerful 88,000 BTU tankless water heater is powered by the 12V and a boat's LPG or an optional external 2.5 LPG tank. The little TugTub™ heater raises Pacific Ocean water from 60° to 104° in about 50 minutes! A computer in the heater allows users to program heating times so that TugTub™ is ready when boaters return from an onshore adventure.

Once the TugTub™ water is hot, boaters can disconnect from their heater and release the TugTub™ on a long line to fully enjoy the Float & Soak™ experience. They'll stay nice and warm due to TugTub™'s superior heat retention. TugTub™ loses only about 1° of heat every 15 minutes. Because most of the TugTub™ is submerged below the water – soaking in it enables users to sit at eye level with their surrounding water environment!

Orange County, CA boater and TugTub™ inventor, Paul West, said "I thought I was making this hot tub just for my family and friends. But it was 2 a.m. and we were in the Tub, soaking under the stars at Car Harbor. The bioluminescents were putting on a show around us. It was magic. At that moment, we knew we had to share this unique and powerful experience with others."

The TugTub™ packs up into two soft carrying bags that stow away easily. For something so small, that sure is "living large!"

The FNS-200 TugTub™ sells for \$3,950. Call (714) 408-7820 for sales information.
